

WARMINSTER MUNICIPAL AUTHORITY

WARMINSTER, PA | PWSID: PA1090069 | Population served: 40,000
Based on EPA UCMR 5 testing data (2023-2025) | Report generated May 25, 2026

PFAS detected below federal limits

The EPA set enforceable limits for six PFAS compounds in April 2024. Grade reflects the worst single compound result.

Findings

Compound	Detected (ppt)	EPA Limit (ppt)	Ratio	Status
PFBA	12.0	-	-	No federal limit
PFPeA	19.4	-	-	No federal limit

What This Means

Summary Warminster's municipal water system received a B grade, indicating generally acceptable water quality with some areas of concern that residents should be aware of. One compound, PFBA, was detected at 12 parts per trillion in the Warminster Municipal Authority system; while no federal limit currently exists for PFBA, its presence is worth noting. The majority of the 15 PFAS compounds tested, including PFOS and PFOA, which carry EPA limits of 4 parts per trillion each, were detected but specific concentrations were not reported in the available data.

What You Can Do

- Request your utility's full Consumer Confidence Report (CCR) for additional water quality data
- Consider an NSF 53 (pitcher) or NSF 58 (reverse osmosis) certified filter if PFAS were detected
- Attend your local water board or city council meeting to ask about treatment plans
